

MEMORANDUM

To: Craig D. Ausen, PE, City of Waukesha

From: Alexander Cowan, PE, PTOE

Date: April 11, 2025

Project No.: 24-0447.10

Re: Westowne Avenue & Brad Street
Two-Way Stop to Four-Way Stop Conversion Request

Background

A request was made for the potential conversion of the existing two-way stop-controlled intersection at Westowne Avenue and Brad Street to a four-way stop. Attachment 1 shows the intersection configuration. Westowne Avenue and Brad Street are both unposted 25-mph two-lane roadways. Parking is allowed on both roadways, with the following exceptions:

- Parking prohibited on the north side of Brad Street east of Westowne Avenue.
- Parking restricted from 7pm-2am on Westowne Avenue immediately north of Brad Street.

Crash History

A review of the WisDOT Community Maps tool suggests the most recent reported intersection crash occurred in January, 2025. This crash involved an impaired teen driver and resulted in property damage, but no injuries. No other crashes were reported within the WisDOT Community Maps tool after 2014.

Traffic Volumes

An intersection turning movement count was conducted on Wednesday, March 26, 2025, to understand the magnitude of traffic entering the intersection. The count resulted in the data shown in Attachment 2. Brad Street experiences approximately 355 vehicles per day (vpd) while Westowne Avenue experiences approximately 190 vpd. The majority of traffic within the intersection travels to/from the east leg of Brad Street to access Grandview Boulevard to the east. Traffic entering the intersection from the east accounts for nearly 50% of all traffic. Additionally, nearly 80% of the traffic approaching from the north, west, and south make a turn onto the east leg of Brad Street.

An all-way stop control warrant analysis was evaluated based on the Manual on Uniform Traffic Control Devices (MUTCD) and WisDOT guidance. The results, shown in Attachment 3, suggest that an all-way stop is not warranted based on the traffic volumes. The review does suggest that the intersection meets WisDOT Warrants 1 and 5, which verify all roadway approaches are of a similar classification type and that undue delay will not be created by an all-way stop condition, but these warrants are not grounds within themselves to warrant an all-way stop installation.

Sight Distance

Although sight distance appears to be adequate, trees and vegetation near the intersection present some sight distance obstacles.

Conclusion

Given the lack of a reported crash history and low traffic volumes that do not meet the necessary thresholds, it is not recommended that an all-way stop be installed at the Westowne Avenue intersection with Brad Street. Given traffic volumes along Brad Street are higher than Westowne Avenue, it is recommended that the two-way stop control be adjusted so that free-flow conditions operate along Brad Street and Westowne Avenue be required to stop. This revised control is also consistent with the higher Brad Street through volumes. Should the recommended signing adjustment be made, it is recommended that temporary flags be added to the signs to draw additional attention to the change.
