

Proposed New Fire Hydrant Location

For our scope of work, we will:

1. Directional bore approximately 700' of 6" HDPE for new waterline
2. Excavate tap hole near Arcadian Ave for City of Waukesha Water Utility to make tap
3. We will connect new 6" HDPE pipe to City supplied valve
4. Excavate on south end of line to install new 6'6" bury hydrant
5. Proper cleaning and testing procedures to meet City specs
6. Backfill all areas to grade
7. Landscape restoration of area disturbed by Arcadian Ave.

Also, as I reached out to the City for information, they responded with some info I was not expecting. Typically for new construction like this the General Contractor will take care of all the front end with the City so a lot of this is new to me. I will forward the info so you can see some of the additional things that are needed. I assume they will provide this in your meeting today.

Thank you,

Tj Laney
