NOTES:

1. EXISTING DRAINAGE PATTERN OF THE LISKOWITZ PROPERTY IS PRIMARILY TOWARDS FLEETFOOT DRIVE AND INTO THE CURB & GUTTER DRAINAGE. A SMALL PORTION OF THE LISKOWITZ PROPERTY EAST OF THE CURRENT HOUSE FLOWS EASTERLY TOWARDS THE WESTERN DITCH LINE OF GUTHRIE ROAD.

NOTES:

1. PROPOSED DRAINAGE PATTERN TREATS THE IMPERVIOUS SURFACE RUNOFF ON SITE FOR THE ADDITION OF BUILDING #9 TO THE EXISTING EXECUTIVE TOWNHOUSES OF FLEETFOOT DRIVE. THUS, NO UPGRADES ARE REQUIRED TO THE PUBLIC AND REGIONAL FACILITIES TO ACCOMMODATE THIS PROPOSED DEVELOPMENT.

2. THE PROPOSED ADDITION MEETS OR EXCEEDS THE REQUIREMENTS FOR STORMWATER TREATMENT FOR A SINGLE LOT DEVELOPMENT. AS SUCH, IT DOES NOT ADVERSELY AFFECT OR BURDEN THE STORMWATER MANAGEMENT PRACTICE DESIGNED FOR THE EXISTING DEVELOPMENT.

3. CALCULATED POST-CONSTRUCTION WATERSHED AREA IS 24,225 S.F. (0.556 AC.) IN SIZE.

4. OFFSITE DRAINAGE FROM EASTERN AND SOUTHERN ADJACENT PROPERTIES IS DIRECTED BY GRASSED BERMS AND SWALES AROUND THE INFILTRATION BASIN AND PROPOSED IMPERVIOUS SURFACE AREAS.

5. RUNOFF FROM THE PROPOSED BUILDING #9 ROOF, PATIOS AND WALKWAYS IS DIRECTED VIA GRASSED SWALES TO FLOW INTO THE PROPOSED INFILTRATION BASIN. EMERGENCY OVERFLOW OF THIS STORMWATER SYSTEM IS THROUGH THE SWALES TOWARDS FLEETFOOT DRIVE.

6. MOST OF THE DRIVEWAY RUNOFF CANNOT BE DIRECTED TOWARDS THE INFILTRATION BASIN, SO THE SOUTHERN PORTION OF EXISTING BUILDING #8 ROOF RUNOFF IS DRAINED TOWARDS THE INFILTRATION BASIN TO MEET THE STORMWATER TREATMENT REQUIREMENTS.

7. MAXIMUM PROPOSED GRADES OUTSIDE THE STORMWATER MANAGEMENT STRUCTURES (BASIN, SWALES, BERMS, ETC.) ARE 4H:1V (25%) SLOPES
