Re: H.A.W.S. Waukesha – Stormwater Management
City of Waukesha, WI

Summary: The stormwater management facilities presently found at the HAWS site were permitted and constructed under the County's Stormwater Management Ordinance in 2008-09. The design for these facilities provided for additional site development (increased impervious surfaces). The addition and other improvements proposed at this time do not exceed the lot coverage anticipated by the prior design. No change to the design of the existing facilities is required to maintain compliance with ordinance requirements.

Watershed Area:	3.229 Ac
Permitted Impervious Area:	1.675 Ac
Currently-Planned Impervious Area:	1.670 Ac
