

CCTV Tower Project Description: This security tower is a video solution that would provide advanced surveillance and will assist in loss prevention and security in problem locations in our parking lots. This low maintenance trailer is incredibly easy to handle and operate. This tower is on wheels to give us the flexibility to move if need be. The term of use will be permanent at this location, unless changed down the line by our Loss Prevention team. This location was selected due to the volume of parking lot incidents, not necessarily anything recent, but certain data trends taken to justify its installation.

Kroger has already installed over 240 units and many more to come yet this year. They have been proven to decrease the amount of theft and enhance our response time to incidents, such as car accidents, theft and many other incidents that arise in our parking lots day to day.
