RE: Waukesha Water Utility – Saylesville Well 8 Radio Tower Construction Project

Minor Site Plan Architectural Review Submittal

Project Details:

The project consists of the construction of a new 70-foot antenna tower and concrete pad. The antenna tower will be used to provide better SCADA communications for Waukesha Water Utility monitoring system by raising the antenna from its current location and height. This project includes the installation of underground conduit and antenna/communications cables between the antenna mounted on the new tower and the existing Saylesville Well 8 building to be connected to the existing SCADA control panel located at this well house.

Thank you,
